

## November 2012 – Multi-turn Evening

### *Maurice Sore*

Maurice opted for a hands-on session and he was kept busy. He was trying to get members using the skew chisel and got them making a dibber.

In the photo Maurice is guiding Alan Munson as he tackles the dibber with the skew. The result:

**HAPPINESS IS:.....**

....showing your dibber!!!!

Here Saun Clifford is mentoring a first time turner on Maurice's lathe.

### *Trevor Branton*

Trevor spent the evening with another hands on session, again involving the skew but this time he showed how it can be used to turn a rough piece to a cylinder. Several members had a go and he followed this with the Sorby texturing tool, demonstrating how it can be used for knurling and to make decorative spiral along the length of a piece.

### *Ian Cotgrove*

Ian also used the hands on approach to his evening but as the photo shows a vast amount of the time was spent discussing the finer points of turning. The other photo shows that he did do some turning.

### *John French*

A Chris Stott designed "Chinese Hat Box" was the project that John chose to demonstrate, he used a piece of Sycamore and turned the shape of the top first before parting it off, then the box was shaped and hollowed out. After turning one, he then started another and managed to encourage our Treasurer to have a go at shaping the outside and hollowing the inside.

### *Camvac*

Camvac also spent the evening with us, showing the range of extract units available and giving a short presentation on the types and advantages and disadvantages of various extract units.
